

ReliCheck Mixed Methods Studio

Beta User Guide · Workplace Equity Survey Dataset

Welcome. This one-pager walks you through the six stops in the Mixed Methods Studio, from signing in to exporting your final report. Your account already has full access; the promotional code has been applied.

Getting in

1. Sign in at relichecksurvey.com/login.html.
2. Open **Mixed Methods** from the left sidebar.
3. Click **New project**, then upload the attached **Workplace Equity Survey Dataset** CSV when prompted.
4. The six-stop journey opens automatically. Work through it top to bottom.

The six-stop journey

1 Set Up Give the project a title and short description. Confirm the auto-filled summary reads clearly.	2 Structure Data Review the data, framing, and roles summary the workspace generates from the uploaded CSV. Adjust roles if any variable was mislabeled.
3 Choose Design Pick one of three designs and complete the Confirm sub-step. Explanatory runs Numbers then Themes. Exploratory runs Themes then Variables then Numbers. Convergent runs Themes and Numbers in parallel.	4 Analyze Design-aware sub-tabs open here. Spend real time in the Codebook & Themes workspace: theme list on the left, codebook entry form in the middle (short definition, inclusion criteria, exclusion criteria, example quotes), evidence drawer on the right with the actual coded responses.
5 Integrate Evidence Open the Joint Display to see qualitative and quantitative findings side by side. Draft integration paragraphs and run the Strength Check .	6 Defend the Report Generate the draft report. Export to DOCX or PDF . This is your shareable artifact.

What we are listening for

Anything that feels off. Friction, confusing language, a button that does not behave the way you expect, a missing affordance, a moment where you had to guess. A few specific questions, if any resonate: did the six-stop strip make the workflow legible? Did the Codebook entry form give you what a dissertation-grade codebook needs? Were the design descriptions on Choose Design enough to choose with confidence?

How to send notes back

Reply to the original email. Bullet points, screenshots, voice notes, whatever is easiest. No structure required, no hard deadline. If something breaks outright, send the URL and a quick description.
